Pouce

316 Stainless Steel Nails

Advantages

- High Strength 125,000 - 145,000 PSI.
- Eliminate Staining and Streaking on Lumber.
- High Resistance to Sea Water and Other Chloride Environments.

Corrosion Resistance

Corrosion resistance of nails is of primary importance for wood and plywood construction applications which are exposed to weather, high moisture or other caustic conditions. This is particularly true in cases where the wood is chemically treated.

Appearance

Today's high cost of lumber makes even the most modest building project a considerable investment. Evaluate the added cost of stainless steel nails over nails made of plain or galvanized steel in terms of **total project cost**. Since expenditures for fasteners are usually minor in comparison with labour, lumber and other costs, the premium for lifetime protection from staining and streaking is easily justified.

Stainless Steel Common Nails 316 Stainless Steel

- Shank, Annular Ring or Screw Thread - our option.
- Flat Head • Diamond Point

All-around general purpose commercial nails with low profile thread.

Also available in Smooth Shank or Screw Shank.

Nails for Marine Service

316 Stainless Steel and Silicone Bronze

- Large Flat Head • Annular Ring Thread • Diamond Point

- Large bearing surface under head holds planking securely to framing members on new construction and re-nailing projects.
- Annular Ring "Barbed" Threads provide maximum holding power and resistance to nail head popping.
- Specify Type 316 Stainless Steel to minimize discoloration of heads and paint bleed-through.
- Silicone Bronze offers best resistance to stress-corrosion cracking under heads in salt water service.

Also available in other gauge and length combinations up to 4 ga. x 6".

Roofing Nails (Slating Nails) Copper

- Large Flat Head • Ring Shank • Diamond Point

- Annular threaded roofing nails provide superior holding power in wood and plywood.
- To determine correct nail length to use add one inch to twice the thickness of slates.
