Information sur les écrous à sertir

Pouce

STAINLESS STEEL Inch Sizes

Self-Clinching FLUSHNUTS add strong load-bearing threads in panels too thin or too ductile to tap — also they provide a flush-with-the-panel fastening. Installation requires only squeezing pressure with any pneumatic or hydraulic parallel-acting press.

Note: Clinching profile may vary.

MATERIAL:

300 Series Stainless Steel (Passivated per QQ-P-35)

USE IN :

Materials with Rockwell Hardness of B-70 or less

Don't over-squeeze or hammer Flushnuts. Aluminum panels should be preanodized before fastener insertion.

*tol. +.003 to -.000

PERFORMANCE DATA

INSTALLATION

Drill or punch the correct diameter hole in sheet, referring to table at top. Place shank of fastener in hole and apply a squeezing force between two parallel surfaces sufficient only to embed hexagonal head flush in sheet. The metal displaced by the head flows evenly and smoothly around the back-tapered shank of the fastener, securely locking it into place with high pull-out resistance while at the same time, the embedded hexagonal head provides high torque resistance.

A wise choice...
PEM Fasteners for load-carrying threads in thin metal sheets

Metric

■ "CLINCHED BY A SQUEEZE WITH THE GREATEST OF EASE" — The installation of PEM fasteners is merely a matter of inserting them in previously punched or drilled holes in the sheet metal and applying squeezing force to imbed the clinching ring completely in the sheet.

One or several at a time may be pressed into position and permanently locked in the sheet.

■ ONLY STANDARD TOOLS ARE REQUIRED — Any pneumatic or oil/hydraulic squeezer adjustable to predetermined pressures is the ideal tool for installing PEM fasteners. The squeezing action of such tools uniformly presses the insert into the assembly regardless of inaccuracies of sheet thickness and gives the sheet material an opportunity to flow evenly and smoothly around the shank of the fastener.

(All dimensions are in millimetres)

PKG QTY. 100

THREAD SIZE	SPAENAUR No.	A Max.	*Minimum Sheet Thickness	Hole Size In Sheet +0.08	C Max.	E ±0.2	T ±0.1	Shank Style	Min. Distance Centre Line Hole To Sheet Edge
M8 Pitch 1.25	201-120 CARBON STEEL Cad or Zinc Pltd. Our Option	2.21	2.3	10.5	10.44	12.65	5.47	2	9.7

* SELECTION OF SHANK LENGTHS — PEM fasteners in each thread size are available with several shank lengths to meet the specifications of those design engineers who want panel holes refilled as much as possible. PEM fasteners with the shortest shank lengths provide adequate holding power for most applications in panel material which exceeds the minimum specified sheet thickness.

NOTE:
Use Carbon Steel PEM fasteners in materials with Rockwell hardness of B-85 or less.

Stainless Steel PEM fasteners are for use in materials with Rockwell hardness of B-70 or less.
